

Using RPA in Admission and Discharge Process in Healthcare

The admission and discharge procedures in healthcare are important steps that happen when someone goes to a hospital for treatment and when they leave after getting care. These processes include different tasks and involve doctors, nurses, patients, and the hospital's administrative staff.

Some of the steps included in admission and discharge process are -

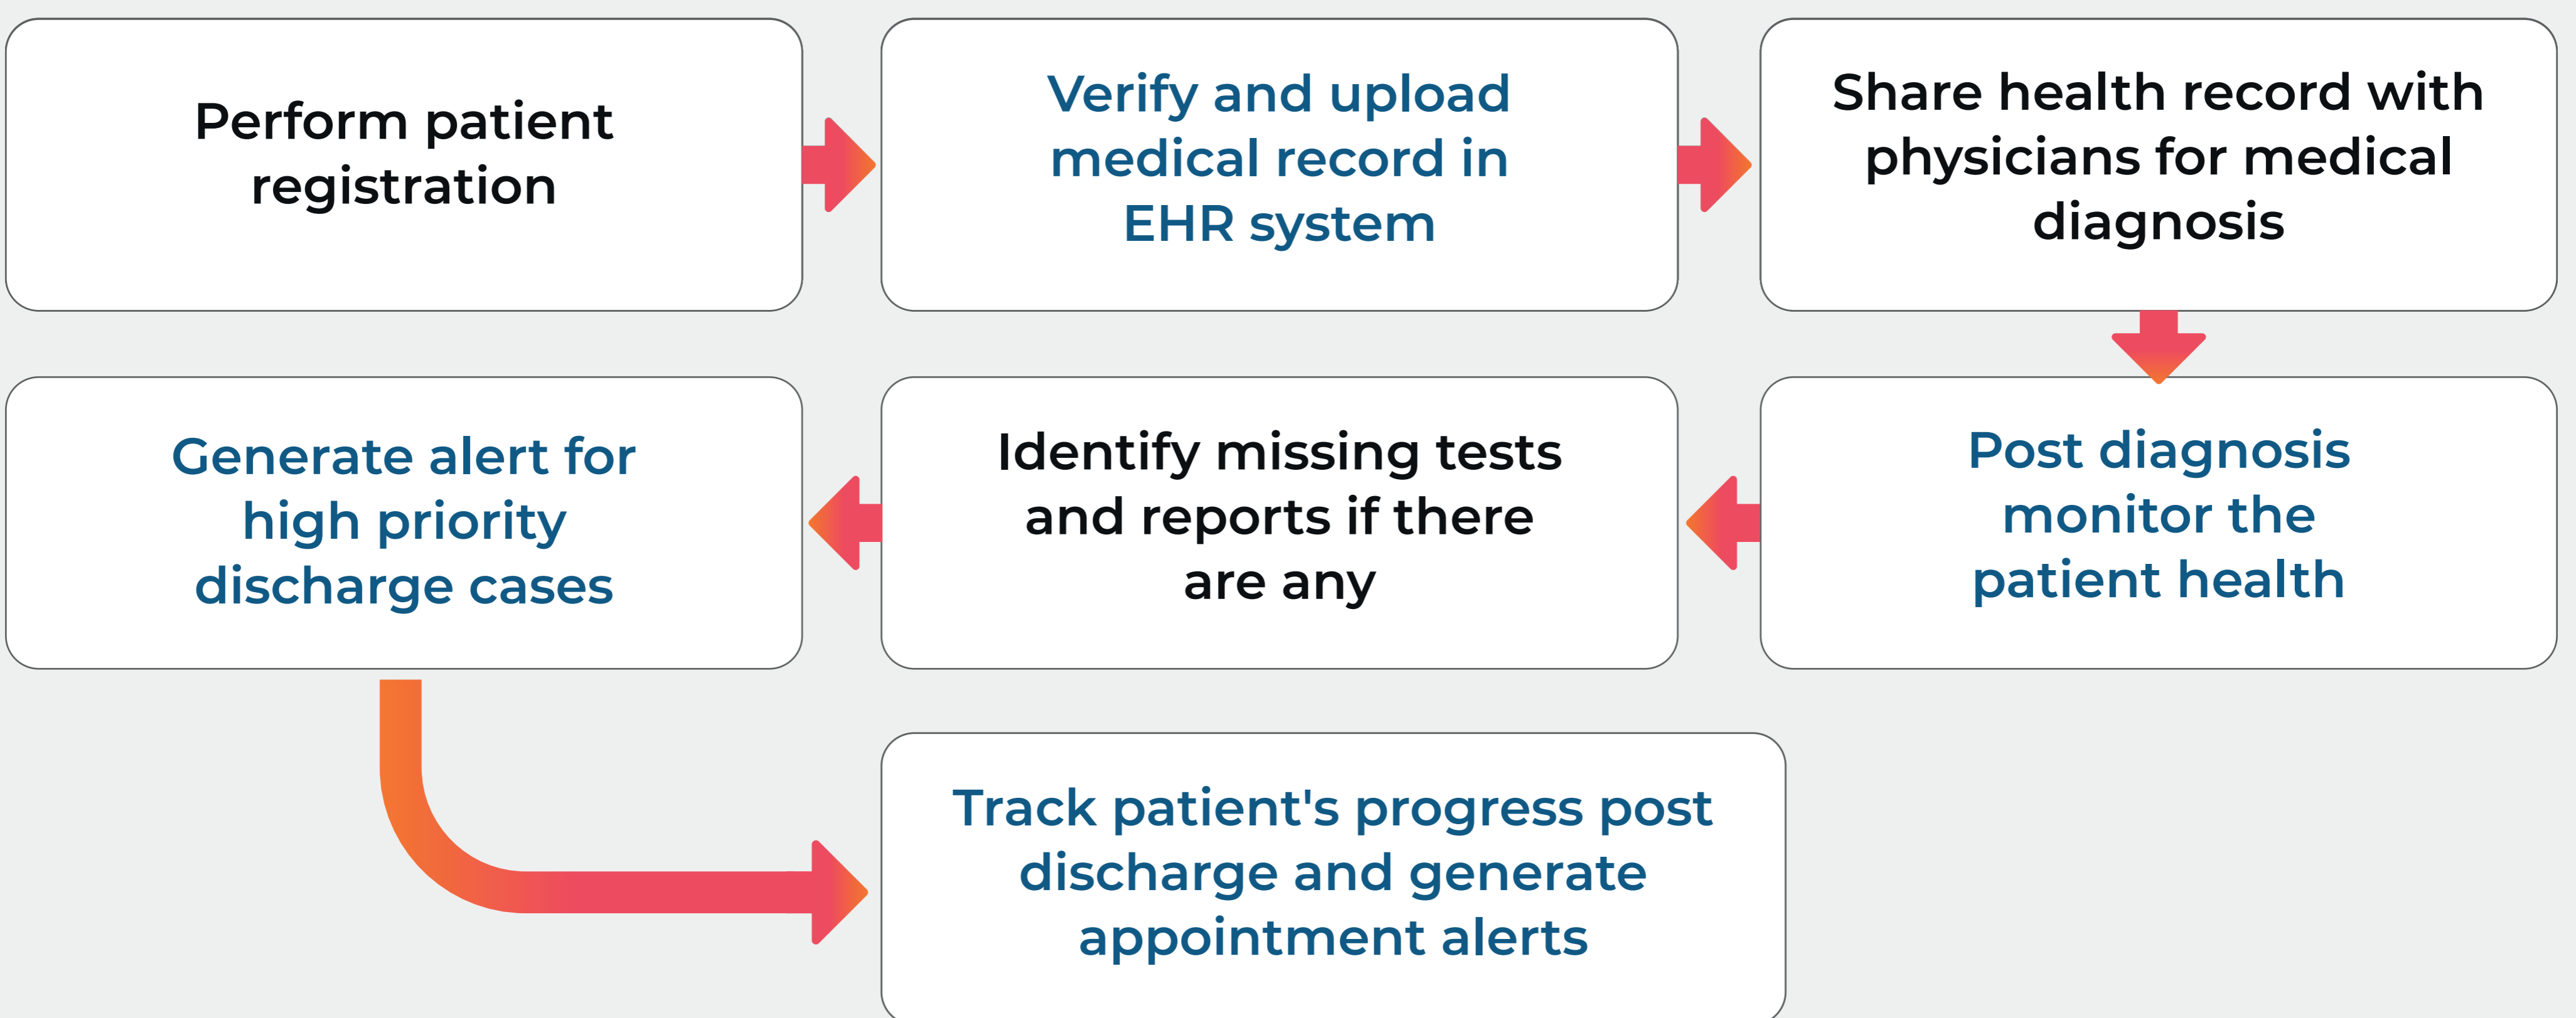

Challenges with Traditional Admission and Discharge Process

How does Automated Admission and Discharge Process Work?

With a lot of steps involved in the admission and discharge process, RPA bot can handle the process execution. Instead of humans, RPA bot can-
