

Agentic Al in Home Care:

Personalized, Predictive, and Proactive Solutions

Agentic AI is an advanced, autonomous system that proactively integrates real-time data from sources like EHRs, wearables, and caregiver inputs. Using machine learning and predictive analytics, it:

Dynamically adjusts care plans based on patient needs.

- 2. Monitors health metrics and alerts for anomalies.
- Enhances communication via intelligent virtual assistants.

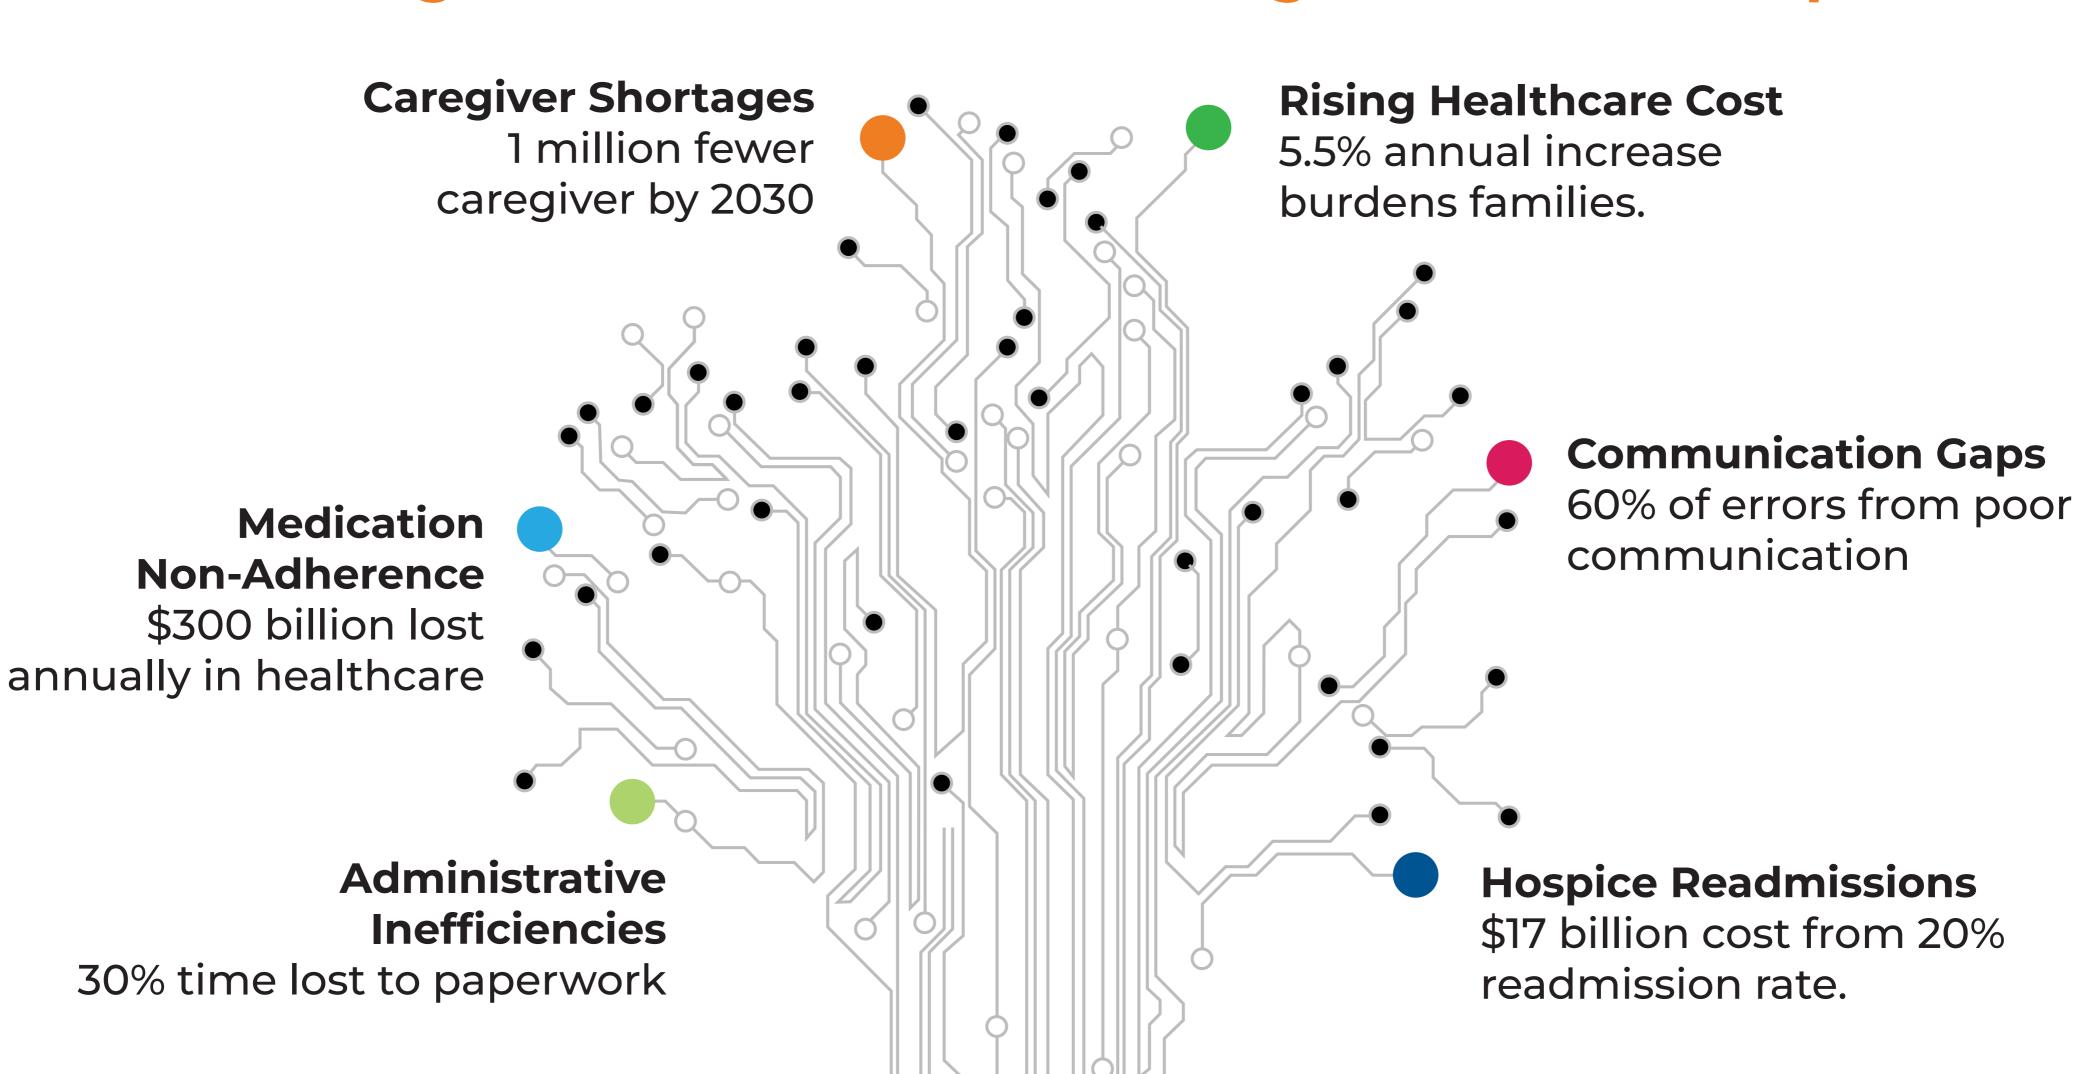

Dynamic Adaptation Proactive Decision - Making Autonomous Action

Challenges in Home Care Where Agentic Al can Step In

Application of Agentic Al in Home Care

Traditional Al Matches based on static criteria

like skills and availability, ensuring basic compatibility.

Matching

Caregiver

Agentic Al
Considers dynamic factors like

workload, proximity, and personality, enhancing satisfaction and care quality.

Analyzes historical data to suggest generic care plans, lacking real-time adaptability.
