An **80-90%** response rate can be achieved better with chatbot

How can Business Benefit from ChatGPT?

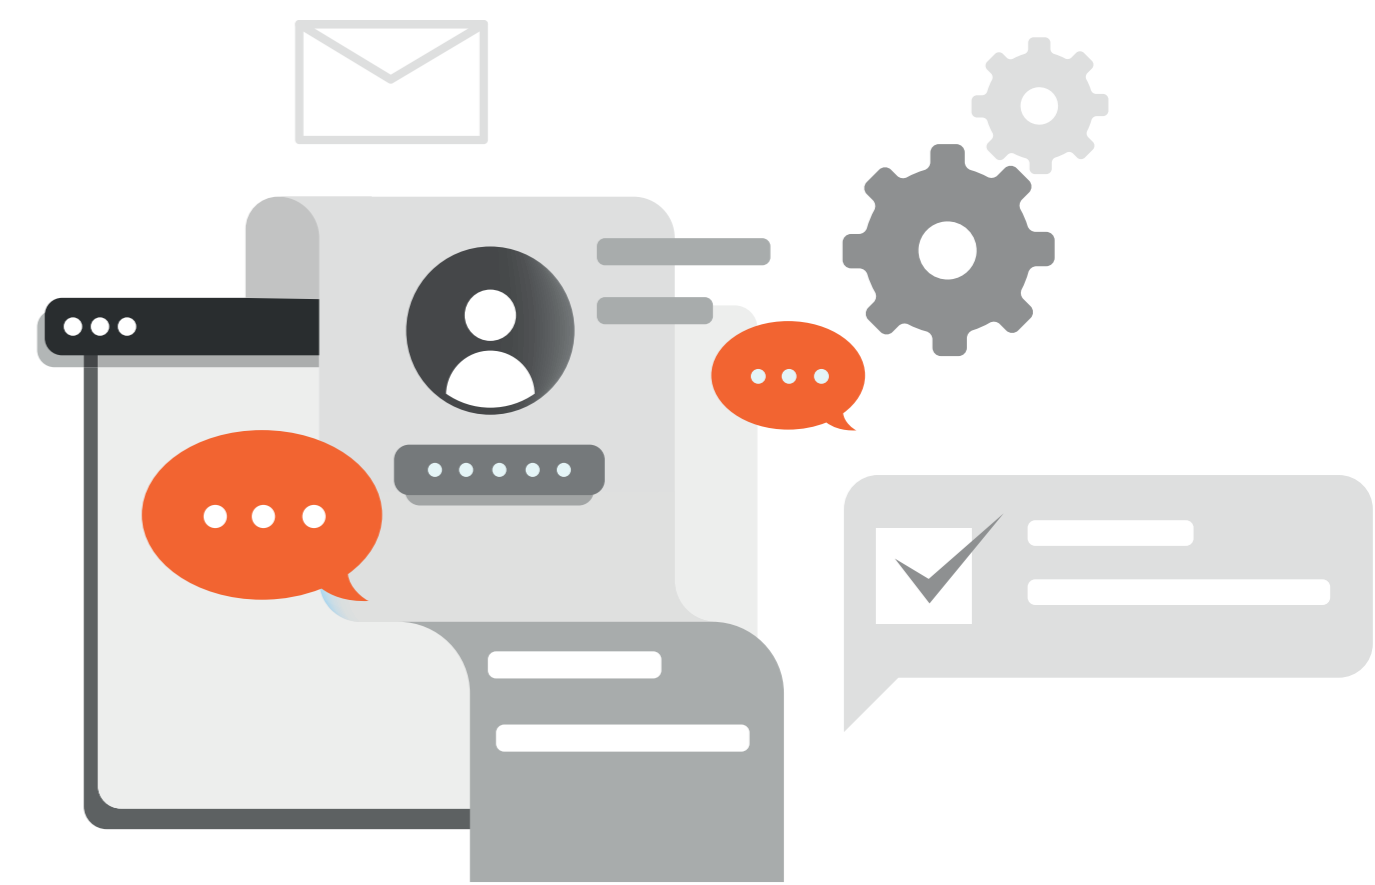

Data Processing

ChatGPT can comprehend the meaning of words and phrases with Natural Language Capability and more accurately can retrieve, sort, process data. It can also create report on data transactions based on the input received.

Analyse User Input

With natural language capability, ChatGPT can identify and understand input automatically. HR departments can create self service assistance by integrating RPA with ChatGPT, so when user ask queries, based on input it retrieve and offer instant resolution.

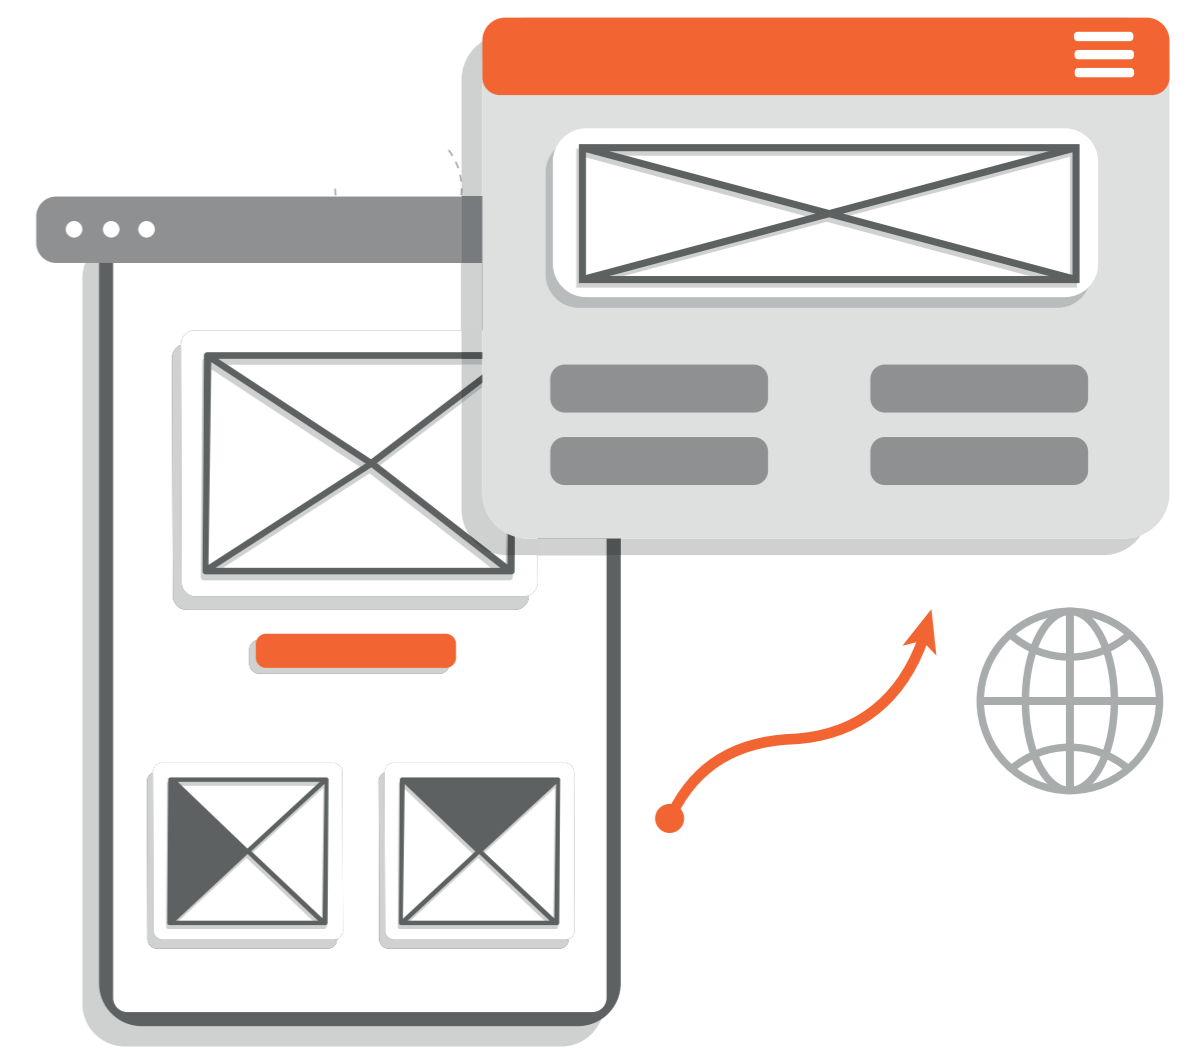

Automatic Report Generation

ChatGPT can help business to get data insights and report generation based on conversation and past interactions. Banking, healthcare, and logistics can use ChatGPT+RPA to get in depth analysis, and audit report generation for maintaining cost effectiveness all across the organisation

Customer Interaction

ChatGPT can increase customer engagement by soliciting information from users and aid in understanding of process, solutions or problems just by utilising its natural language processing capability. With ChatGPT+RPA, organisations can offer faster resolution with minimal human intervention and at cost effective rate.

Automation Development

ChatGPT can also help coders for easy automation implementation and quickly create user documentation for code. Developing team can easily copy paste their requirements for code development on ChatGPT and it easily fetch the desired information from the given input and make their own documentation for codes.

What Type of Businesses can Utilize ChatGPT?

ChatGPT can be utilized in multiple industries, some of these are-

- » Healthcare
- » Banking & Finance
- » Manufacturing
- » IT
- » Telecommunication
- » Education
- » Retail
