Release Specifications

Version: 5.6.3

Type: Patch

Date: 18/02/2021

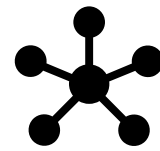

Release Artifacts

AE Engine
WAR

AEUI
WAR

Integration
WARS

*AutomationEdge Server V5.6.3 is compatible with Process Studio V5.6.0

Browsers Supported for AEUI

57 & above

80 & above

11

52 & above

You can download earlier version Release Notes by clicking on the respective versions:
[5.6.0](#), [5.6.1](#), [5.6.2](#)

What's New?!

- AutomationEdge Server (Engine & UI):
 - Added the ability to upload files with .docx and .xlsm extension to the server

Fixed Issues

- Integration service now continues to process the newer requests despite failure in any earlier of requests ensuring continuity of automation.
- Fixed the issue where occasionally users would see reverse graphs or negative values for workflow execution time. This fix will be applicable for requests submitted after the 5.6.3 and will not have any impact on earlier request data.
- Fixed the issue where workflow execution would fail if there were no free credentials in the credential pool.
- API: Logout API can now be consumed without the *tokenRequired* parameter
- In certain complex workflows having multiple nesting levels and with multiple parameters, being passed to child workflows/processes, issues were noticed during execution on Agent. Some internal code changes have been done to optimize execution of such multi-level nested workflows on Agent to fix this issue.

Security Enhancements

- Advisory: We recommend upgrading Tomcat 9 to the latest version (or not older than 9.0.35) as security vulnerabilities have been identified in versions 9.0.31 and 9.0.32

Known Issues / Limitations

- The Status of Integration Services is displayed as UNKNOWN intermittently (for few seconds), on AutomationEdge UI, although the Service may be running.
- The *Time Zone* option under the *Polling Schedule* section of Integration > Type Configuration menu is disabled. The default time zone of the machine on which integration service is deployed will be used for Polling schedule
- A redundant update status message is displayed for all existing plugins in PS after the *Plugin Sync* operation if any plugin is assigned to or removed from a tenant.
- Copy Query option in Add/Edit Templates in Reports tab on AEUI does not work for IE browser.
- No email notification is sent when a workflow configuration parameter is removed; even after configuring '*Workflow Create and Update*' notification in Settings menu in AEUI
- An incorrect the email notification – 'Parameter is added' instead of 'Parameter is changed' – is sent when the value of a configuration parameter is changed
- While Downloading Requests from AEUI, Created and Completed dates need to be formatted as 'Date' in Microsoft Excel in the downloaded CSV file
- WebGUI workflows must always be marked as sequential. If one of the WebGUI automation workflows running as non-sequential workflow is terminated, then all the subsequent requests remain in *New* state.
- Agents will acquire Tenant level proxy settings (If Any) during upgrades discarding the Agent level proxy settings. The required changes need to be done manually
- Agent restart features in not supported on Linux based OS
- Agent type cannot be changed when the Agent is in *Unknown* state
- Existing workflows will not open if Process Studio Distribution folder path has any special characters.
- SSO authentication is not supported for users with *Sysadmin* role or users who want to use the Process Studio
- Process Studio is not fully supported in Mac i.e. Plugin Sync feature is not supported on Mac.
- Desktop/Surface UI Automation is not supported in Linux based OS
